Interpretive Notes

- Fasting glucose (132 mg/dL) and HbA1c (6.8%) both fall in the diabetes range per ADA criteria (FBS $\geq$ 126 mg/dL, HbA1c $\geq$ 6.5%). Clinical correlation and endocrinology follow-up recommended.
- Lipid profile shows mixed dyslipidemia (high LDL/triglycerides, low HDL) — cardiovascular risk counselling advised.
- TSH mildly elevated; suggest repeat thyroid panel in 6–8 weeks if clinically indicated.

This report reflects the sample as received and tested. Results should be interpreted by a qualified physician in conjunction with clinical findings. Not valid without laboratory seal and authorized signatory.
