RADIOLOGY REPORT — CHEST X-RAY (PA VIEW)

Patient Name: Hammad Asher

Accession No.: CGH-RAD-2026-03187

Age / Sex: 24 Yrs / Male

Exam Date: 10-Mar-2026

Date of Birth: 15-Mar-2001

Referring Physician: Self / Walk-in

Exam Type: Chest X-Ray, PA View

Report Status: Final

Clinical History

Routine health evaluation. No acute respiratory symptoms reported at the time of the exam.

Technique

A single postero-anterior (PA) erect chest radiograph was obtained and reviewed. No prior imaging was available for comparison.

Findings

The cardiac silhouette is mildly enlarged (mild cardiomegaly). No pleural effusion is identified. The lungs are clear bilaterally with no focal consolidation, nodule, or mass. There is no evidence of pneumothorax. The mediastinal contour is normal.

Impression

1. Mild cardiomegaly.
2. Clinical correlation recommended.
3. Consider echocardiogram for further cardiac assessment.

This report reflects imaging findings only and should be correlated with clinical history and examination by the treating physician. Not valid without facility seal and authorized signatory.

Electronically verified by: Dr. Bilal Farooqui, MBBS, FCPS (Radiology) — Consultant Radiologist
