

CLINICAL NOTE

Patient Name: Maria Garcia

Age: 45

Sex: Female

Date: 2026-07-12

Chief Complaint:

Recurrent headaches, blurred vision, and intermittent dizziness for the past 3 weeks.

History of Present Illness:

The patient reports bilateral temporal headaches occurring daily, rated 6/10 in severity. Associated symptoms include episodic blurred vision lasting 10-15 minutes and postural dizziness. No nausea, vomiting, or photophobia. No recent head trauma. She has a history of hypertension controlled with amlodipine 5 mg daily. Family history significant for stroke (father, age 68) and type 2 diabetes (mother).

Vital Signs:

Blood Pressure: 158/95 mmHg

Heart Rate: 82 bpm

Temperature: 36.9°C

SpO2: 98%

Assessment & Plan:

1. Hypertensive urgency — increase amlodipine to 10 mg daily, add hydrochlorothiazide 25 mg. 2. Headaches — likely secondary to uncontrolled hypertension. MRI brain if no improvement in 2 weeks. 3. Lab work: CBC, CMP, lipid panel, HbA1c. 4. Follow-up in 1 week for BP recheck.
